Lean Manufacturing Operative Level 2

SKILLCERT

Roles and responsibilities include:

- Prepare, control, contribute to and complete manufacturing operations
- Follow manufacturing processes and standard operating procedures
- Maintain health and safety requirements and an organised work area e.g. 5s
- Develop and support improvements in the manufacturing operation
- Carry out quality checks throughout the manufacturing operations
- Work closely with stakeholders and have clear reporting lines to ensure appropriate escalation

Course Delivery

Delivery will be via a combination of workplace assessment, classroom delivery and self-study for 12 months. Learners will be working towards the apprenticeship standard, with the end-point assessment completed in the final twelve weeks.

In addition to the core knowledge and skills Lean Manufacturing Operatives must complete one of the following job roles options:

Production/Assembly, Inspection/Quality assurance, Logistics/ Material handling or Production processing/finishing.

Print Technician Level 3

Enables participants to specialise in one of three pathways - pre-press technician, press technician or post-press technician.

BPIF EST·1901

The Print Technician will have a strong core of knowledge covering the print production process, including paper science, pre-press, press and post-press, and will specialise and supplement this core knowledge by following one of the three pathways; Pre-press Technician, Press Technician or Post-press Technician.

A Pre-press Technician is skilled in all the physical processes that occur before the printing and finishing stages.

The Press Technician will run or oversee the running of the printing press typically a multi-colour Flexographic Press.

Post-press or finishing is a general term used in the print industry to describe any processes after printing including corrugated conversion.
